

# SilkRoad Recruiting

## Release Notes

2019.2.1, 2019.2.1.1, 2019.2.2

March 2019

## New features and improvements

### 2019.2.2

Name	Tracking ID	Support Case	Description
Candidate Experience - Character count added to all text and text-area fields	OH-39549		<p>A character count has been added to text/text-area fields in Candidate Experience except the Resume text-area field.</p> <p>Character count helps you know when you are close to reaching the character limit for a field.</p>

### 2019.2.1

Name	Tracking ID	Support Case	Description
Choose the fields to be displayed in the Requisition Approval email	OH-40453		<p>Settings page in the ATS has a new setting: <i>Displayed Requisition Approval Email Fields</i>. It lists all system fields currently included in the requisition approval email. The fields are listed in alphabetical order and are all checked by default—which means they are all included in the email. ATS users with access to the Settings page can now decide which fields to include in the Requisition Approval email. Uncheck the ones you do not want to include and click <b>Save</b>.</p> <p><b>Note:</b> Custom Fields are NOT listed as options to remove from the email. Those fields are always included in the Requisition Approval email.</p>
Business Unit info added to nightly job feed	OH-40677	00781636	The information about what business unit each job is linked to in the ATS is

Name	Tracking ID	Support Case	Description
			now being sent to all the job boards that are part of the generic job feed.

## Resolved issues

### 2019.2.1.1

Name	Tracking ID	Support Case	Description
Job Seekers unable to apply to jobs	OH-40905	00785842	<p>In the v2019.2 release, the code was updated to change a hardcoded variable. That variable was originally created to hold the correct value for the different SilkRoad environments, but it no longer worked. As a result, the form action for submitting eForms was using http:// instead of https:// in our production environment. That was causing a POST to http:// a redirect back to https://, and during that shuffle, the form variables were being lost, which caused the issue where job seekers were not able to apply to the job.</p> <p>The fix was removing the protocol and use a relative path for the form action.</p>

### 2019.2.1

Tracking ID	Support Case	Description
OH-40858		Fixed an issue where custom fields that had been added to the configurable application form in the new Candidate Experience were not displaying consistently.

## Technical support
